

Meter Reading

Meter reading of electricity, gas, water, and steam for malls, shopping centers, office buildings, industrial centers, apartment buildings, cities and communities for the purpose of resale or recovery of utilities.

Oakland Utilities is engaged in the meter reading of shopping centers, strip centers, outlet malls, retail malls, office buildings, apartment complexes, cities and communities throughout the United States.

Metering is accomplished via analog (dial type) meters, electronic LCD read out meters, and computer read pulse meters such as the intellimeter system. Most meters are read by our field personnel on a monthly basis with an emphasis on avoiding estimates at all costs. Cooperation with operations and maintenance staffs ensure a timely reporting of all start and stops as they relate to occupancy changes.

Electrical meter bank with 24 individual meters arranged in a 4x6 grid. The meters are used for measuring energy consumption in a multi-phase system.
